Art Unit: 1653

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a method for identifying substances that alter the interaction of presenilin and presenilin binding protein, classified in class 435, subclass 7.1.
- II. Claims 7-17, drawn to a method for identifying substances that modulate nuclear translocation of an armadillo protein, classified in class 435, subclass 69.1.
- III. Claims 18-23, drawn to a method for screening individuals for presenilin alleles associated with Alzheimer's disease, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

The methods of Inventions I, II, and III require different products and steps and have different endpoints. Therefore, Inventions I, II, and III are patentably distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
